2

The Role of Metacognition in Mathematical Problem Solving

Emeritus Professor Dianne Siemon
& Dr Kathy Arnold

3

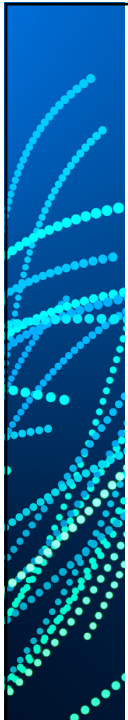

Problem Solving in the Curriculum

Students engage in mathematical problem solving when:

- they are presented with a problem situation for which they do not immediately know the answer,
- work through a process of planning, choosing and applying strategies, reviewing and analysing solutions,
- formulate situations mathematically,
- draw on previously learnt concepts, skills, procedures, and processes,
- evaluate, interpret and communicate solutions, and
- justify the reasonableness of their approaches in terms of the situation.

(ACARA, 2022; VCAA, 2024)

Problem Solving?

Note your first response.
Share with a neighbour.

What do you notice?

Crucial to any problem-solving experience is the task itself.
(Kulm, 1979, p. 1)

Siemon & Arnold, MAV 2024

A MATH DISCUSSION-STARTER:

Which number doesn't
belong?

9 16 25 43

Metacognition

Metacognition – “one’s knowledge of one’s own cognitive processes and products or anything related to them ... [including] the active monitoring and consequent orchestration of those processes” (Flavell, 1976, p. 243)

Metacognition is an awareness and understanding of one’s own thought processes ... often referred to as ‘thinking about thinking’

Metacognition – cognitive awareness and self-regulation

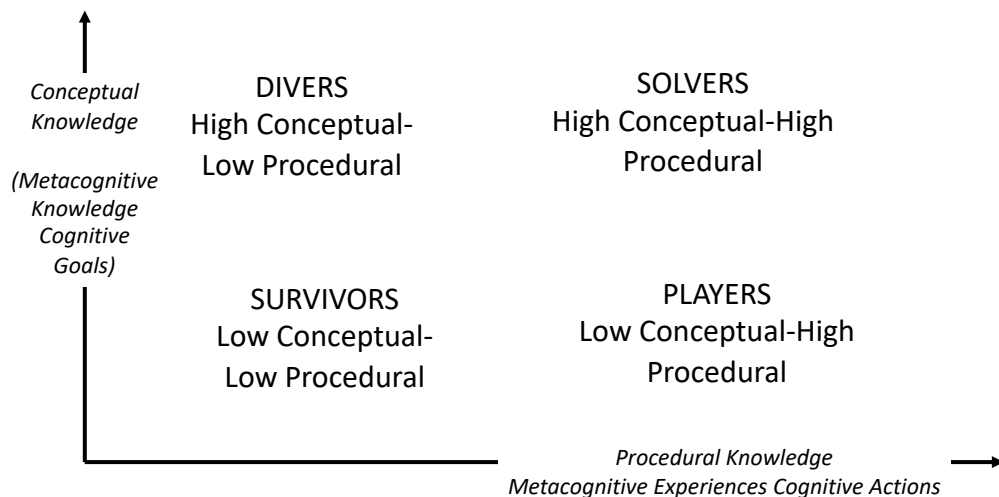

Flavell's Model of Cognitive Monitoring (Flavell, 1981)

Siemon & Arnold, MAV 2024

7

7

The role of metacognition

Meta-Model of Children's Approaches to Mathematical Problem Solving (Siemon, 1993)

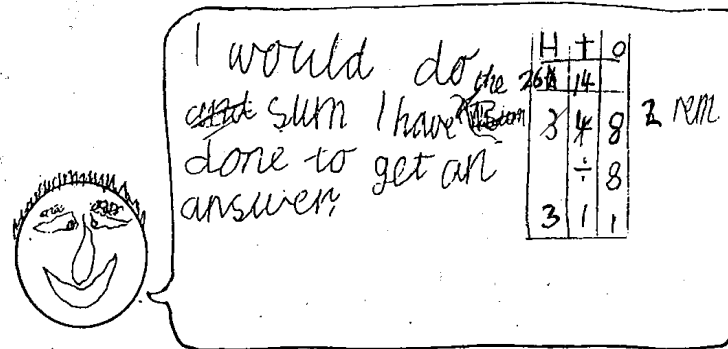

Siemon & Arnold, MAV 2024

8

8

A 'Player'

Eight families shared a Tattslotto win of \$348. How much did each family receive? (Year 4)

Nick's 'Talking Head' response (Siemon, 1993)

Siemon & Arnold, MAV 2024

9

9

A 'Survivor'

Richard's solution strategy for $19 + 27$

$$\begin{array}{r} 19 \\ + 27 \\ \hline 31 \\ \hline 43 \\ \hline 424 \\ \\ 46 \end{array}$$

Can you identify Richard's strategy?

What does this response say about what Richard (Year 6) knows and values?

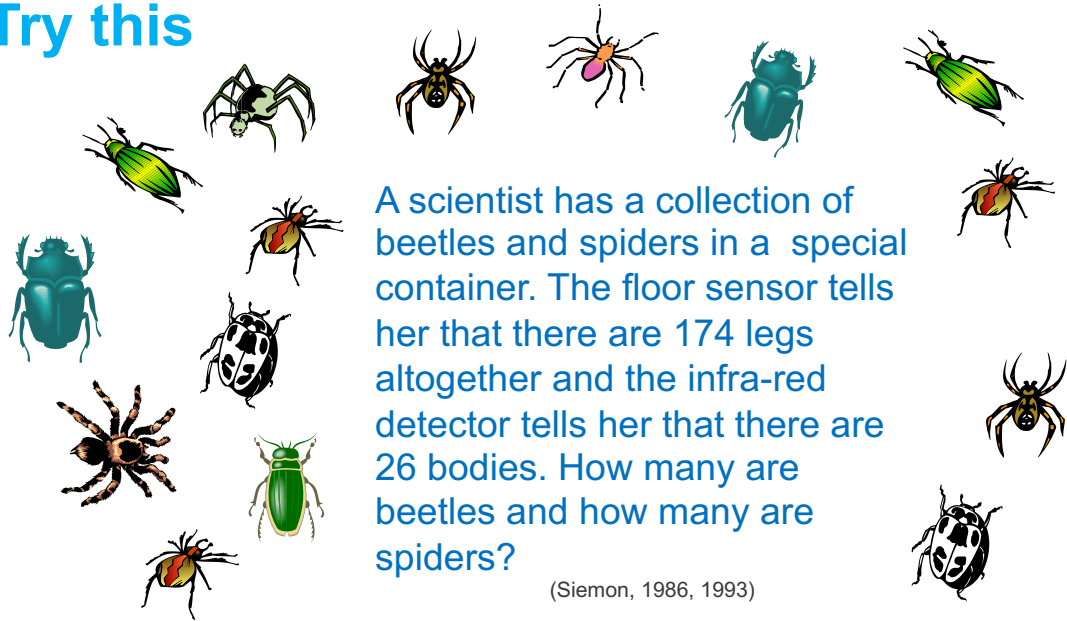

Source: Year 6 Classroom teacher (Siemon, 1993)

Siemon & Arnold, MAV 2024

10

10

Try this

A scientist has a collection of beetles and spiders in a special container. The floor sensor tells her that there are 174 legs altogether and the infra-red detector tells her that there are 26 bodies. How many are beetles and how many are spiders?

(Siemon, 1986, 1993)

Siemon & Arnold, MAV 2024

11

11

Problem

No immediately available
solution strategy
PROBLEM TYPE

Process

Re read the problem, record the data,
what is required, UNDERSTAND
THINK about the problem, have I seen
something like this before
TRY something
CHECK to see if it worked or not, does it
satisfy the problem conditions

Strategies

Trial and error
Make a model
Draw a diagram
Use equations
If ... then reasoning
Table of values

(Siemon, 1984, 1993)

Siemon & Arnold, MAV 2024

12

12

Problem Solving

The totality of processes engaged in by a group or individual as they attempt to negotiate a satisfactory resolution to a situation, task or question for which they had no immediately available, valid solution strategy or procedure at the outset.

(Siemon, 1984, 1993)

Implications for teaching – need to consider:

- Situations, tasks ... PROBLEM TYPE
- Problem solving as a PROCESS
- Possible solution STRATEGIES

Siemon & Arnold, MAV 2024

13

13

Problem Type

Recognising problem type and/or structure can help identify an appropriate solution strategy.

Problems can vary according to:

- the nature (transparency) of the information provided,
- the extent (amount) of information provided,
- the number of steps involved, and
- the underlying structure.

Part	Part
Whole	

Additive Structure

12 strawberry plants per row, 18 rows, how many plants?

M ₁	M ₂
1	12
18	?

Multiplicative Structure

Siemon & Arnold, MAV 2024

14

14

Process

Polya's (1945) Model for effective Problem Solving

1. *Understanding the Problem*
2. *Devising a Plan*
3. *Carrying out the Plan*
4. *Looking Back*

Use **one ball** of play dough to represent 7 quarters.
You must use the entire ball.

Siemon & Arnold, MAV 2024

15

15

The ASK-THINK-DO Problem Solving Cycle

Questions we can ASK

What is the problems asking?
What do we need to find?
What information is given?
What do we need to know?
Does it make sense?
How could we check?
Have we forgotten anything?
Can we do it another way?

Things we can THINK about

Have I seen anything like this before?
How can I represent the problem?
Is it a part, or is it a whole?
What do I know?
Is there a similar problem we could use?
How can I organise the information?
What happened first?
What needs to be done next? Does it make sense?
What is not needed?
Where can I start?

Things we can DO

Make a list. Record data.
Draw a diagram.
Check information
Re-read the problem
Make a model
Use a simpler or similar problem.
Classify, Order, Compare.
Estimate. Work backwards.
Eliminate options.
Add, subtract, multiply, divide

(Siemon, 1984, 1993)

16

Strategies

- Draw a picture.
- Restate the problem.
- Classify or order data.
- Act it out.
- Ask. "Is it a part or is it a whole?"
- Record data
- Estimate
- Use a pattern
- Make a model
- Experiment
- Use a simpler problem
- Make a table

Butterflies

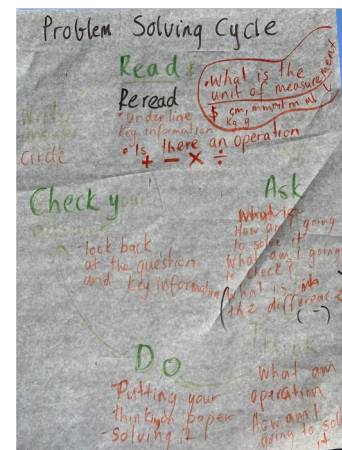

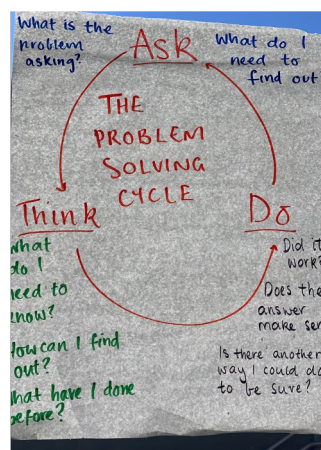

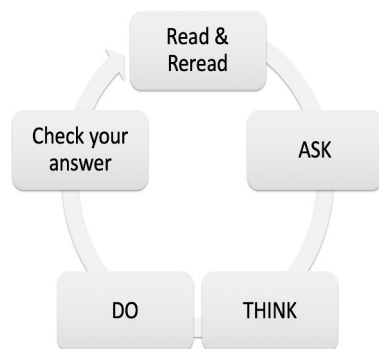

2 drops of nectar are needed to feed 5 butterflies. How many butterflies could be fed with 12 drops of nectar? How many drops of nectar are needed to feed 63 butterflies?

- Draw a graph
- Make a list
- Eliminate options
- Assume a solution and work backwards
- Use symbols
- Write an equation

(Simon, 1984, 1993)

17

ASK-THINK-DO in practice Not a Recipe!

Simon & Arnold, MAV 2024

18

18

19

Choose/develop problems responsively

A scientist has a collection of beetles and spiders in a special container. The floor sensor tells her that there are 174 legs altogether and the infra-red detector tells her that there are 26 bodies. How many are beetles and how many are spiders?

A mad scientist has a collection of beetles and spiders in a special container. The floor sensor tells her that there are 68 legs altogether and the infra-red detector tells her that there are 10 bodies. How many beetles and how many spiders are there?

Farmer Fiona has pigs and chickens. Last Tuesday, she counted 34 eyes and 46 feet. How many chickens does she have?

20

Allow the teaching point to evolve!

It is swooping season! On the weekend, I couldn't believe I was swooped so much that I had to use multiplication to figure out how many times I had been swooped. Banjo and I walked in three different parks (Edinburgh Gardens, Curtain Square and Rathdowne Park). In each park we both got swooped three times by a variety of birds (mostly Mynahs and Magpies.) How many times were we swooped altogether? How many different ways can you represent your answer?

	Mynahs	Magpies
Edinburgh Gardens	3	3
Curtain Square	3	3
Rathdowne Park	3	3
All together	9	9

2/18 times swooped

Fluff!

21

Problem solving can and should be a part of every mathematics lesson

An activity/task that does not result in student's thinking is not worth doing
